EDUCATION

University of Guelph *Expected 2029*

B.Eng., Systems & Computing Engineering (Co-op)

Relevant Coursework: Large-Scale Software Architecture Engineering, Data Structures, Object-Oriented Programming, Digital Systems Design, Engineering Systems Analysis, Probability & Statistics

EXPERIENCE

AI & LLM Generalist Expert *Aug 2026 – Present*

Mercor — Remote

- Passed 4 qualification exams and evaluated 1,000+ AI tasks across 100+ task templates, assessing reasoning, factual accuracy, instruction-following, and output quality.
- Reviewed and corrected model-generated technical responses, identifying failure modes to improve training and evaluation data for advanced AI systems.

Undergraduate Teaching Assistant *Fall 2026*

University of Guelph

- Supported 700+ students and marked 150+ quizzes in ENGG*2400 Engineering Systems Analysis, delivering tutorials alongside instructors.

Strategic Planning Analyst, Financial Automation (Co-op) *May – Sep 2025 & 2026*

Chartwell Retirement Residences — Mississauga, ON

- Rebuilt the Suite Renovation report into a one-button PowerShell workflow over 50K+ records with automated QA, replacing a 4-person, ~6-hour manual process with ~30 min of runtime.
- Automated CapEx Kickout into a scheduled daily run and wrote a VBA macro driving ~100K formula-based cells across 84 worksheets for the 2027 Budget Review.
- Supported the Hyperion-to-OneStream migration, validating linked workbooks, filters, and mappings against source data.

AI Engineer *Sep 2025 – Mar 2026*

Lexora AI — LegalTech Startup (Remote)

- Engineered the RAG pipeline over 10,000+ legal documents behind a production assistant serving 1,000+ users — ingestion, chunking, OpenAI embeddings, and semantic retrieval with Pinecone and LangChain.
- Built the production app in Next.js and React, integrating the OpenAI API, Claude, and Pinecone retrieval for grounded, context-aware responses.
- Built a real-time assistant that turns user conversations into lawyer-ready case reports and a submission flow matching users to a pool of Ontario lawyers by legal specialty and location.

PROJECTS

Feature Factory

Agentic AI Software Engineering Platform — Next.js/TypeScript, LangGraph, Knowledge Graphs, Postgres, Redis

- Built an AI agent platform that turns a one-line feature request into a shipped GitHub pull request, orchestrating specialized agents (design, implementation, review) with LangGraph and knowledge graphs.
- Integrated a Figma MCP so agents translate Figma designs into front-end code, and a corrective-RAG (CRAG) layer that grounds code generation for accurate, context-aware output.
- Engineered a BullMQ/Redis + Postgres pipeline with human-in-the-loop approval gates, per-run locks, and durable pause/cancel that aborts and resumes the live agent.

FeedMe

React Native iOS Group Dining App

- Engineered and shipped a React Native iOS app to 500+ TestFlight users with real-time group chat and collaborative dining workflows.
- Built AI-powered restaurant recommendations and multi-user product features, iterating from real user feedback and testing.

University Management System

Java, JavaFX, Apache POI

- Built a Java/JavaFX university management system with role-based dashboards for student, course, and enrollment workflows using reusable OOP domain models.
- Implemented enrollment validation, course-capacity rules, and Excel-based persistence with Apache POI, keeping application data consistent across sessions.

Endangered Species Visualizer

SpurHacks — JavaScript, Mapbox API, Meshy AI

- Engineered an interactive Mapbox 3D experience combining conservation data, AI-generated animal models, heatmaps, and species-specific audio.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript/TypeScript, SQL, Swift, PowerShell, VBA, VHDL

Frameworks: React, Next.js, React Native, Expo, Node.js, JavaFX, Apache POI, OpenCV, LangChain, LangGraph

AI/Data: OpenAI API, RAG, CRAG, Knowledge Graphs, Pinecone, Supabase, Vector Databases, Embeddings, ETL

Tools: Git/GitHub, Linux, Redis, Excel/Power Query, Power BI
